

Does your university as a body have a process in place to treat waste water?

Azerbaijan State Oil and Industry University (ASOIU) remains committed to its responsibilities in sustainable development and the rational use of resources. In this regard, the university directs its liquid waste to the Hövsan Aeration Station, the main wastewater treatment facility in Baku.

At this station, modern technologies and advanced equipment are employed to ensure effective treatment. The facility operates under the authority of the Government of the Republic of Azerbaijan, while ASOIU's experts actively contribute to research and the development of innovative methods for water purification and efficient distribution.
